To,  
Timothy J. Cornwell, ABC Analytics  
40 Charles Street, Farmington Hills, MI 48335

### **An application for the Data Analyst Position at ABC Analytics**

**Dear Cornwell,**

I am exhilarated to apply for the Data Analyst position at ABC Analytics with the passion and curiosity to explore events in detail. I know how to identify key insights from the bulk amount of data in the shortest possible time. You mentioned in the job description at [glassdoor.com](https://www.glassdoor.com) that your company is looking for a dynamic data analyst who can perform analysis with data to increase efficiency and profitability.

I am a self-starter data analyst with proven expertise and experience. After completing my BSc. in mathematics, I have worked as a Data Analyst at XYZ Innovation Ltd. for the last 2 years. There I collect, model, visualize and optimize data to make better decisions.

I assisted different divisions, including marketing, finance, sales, and administrative team members, in increasing the 22% of total profit. My holistic approach to data analysis resulted in a positive impact there. I can connect data from diverse sources, including Salesforce, PWC, QuickBooks, Google Analytics, Power BI, etc.

Moreover, I can simplify the implementation of data by using effective Excel and MySQL equations. Depending on the situation, I dig deep into the data to classify the most critical data set. Then I apply standard measures to empower the authority to take and implement data-driven decisions.

As the data journey in organizations is changing and updating rapidly, there is no option to ignore the organized and modelled data. Only efficient data analysts can make portray the true potential of data. With my services, you will be able to understand your data better and employ data to retain more revenue and customer satisfaction. I will happily elaborate on the topic with you in the interview room. Thank you

Sincerely,  
**Albert Evans**
